Why wireless for Continuity.

For companies that are using the Internet to run mission-critical applications, reliability is a necessity. Interruptions in Internet connectivity can be costly to your company. **If your business requires redundant Internet connectivity an additional T1 or DSL connection may not be the best answer.** These connections may be served out of the same phone company central office, and may even run through the same conduit. A single line cut from a backhoe, falling tree, or other source can take both connections down.

Having at least one of your connections via wireless transmission gives you true path diversity. Plexcom offers true path diversity with our business continuity service.

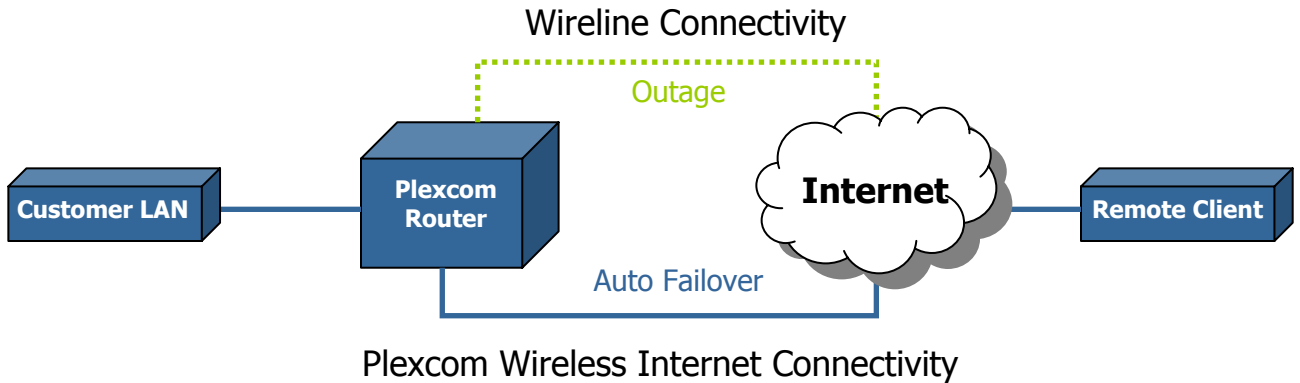

Plexcom's Business Continuity Service Overview

Plexcom's Business Continuity Service is the right choice for businesses needing the highest network connectivity and throughput for mission-critical applications. Plexcom's business continuity service consists of wireless and wireline Internet connections, combined with a router. This edge device aggregates both connections to create a seamless, redundant, reliable high bandwidth connection. The service can work with your existing T1, DSL or cable service, or Plexcom can furnish both the wireless and wireline connections as well as the edge device.

How Plexcom's Business Continuity Service Works.

Plexcom's continuity router distributes network traffic over both the wireless and wireline connections optimizing the use of available bandwidth and reducing the cost of adding network redundancy. This is accomplished by utilizing intelligent routers capable of bandwidth aggregation, best path routing, network load balancing, multi-homing and auto failover technologies.

Plexcom Wireless Internet Connectivity

If the wireline service fails the Plexcom router automatically routes the traffic over the Plexcom wireless connection.

Why Plexcom Networks?

Plexcom operates its own network. We don't have to wait for the phone company to run wires or resolve problems. Our service is delivered to your business via our wireless network, which enables us to provide you with fast, affordable service that can be installed on your timeframe in as little as 48 hours.

Plexcom uses proven cutting edge technologies to deliver reliable and secure broadband service to your business. Plexcom is avid about providing outstanding service and personalized support and we back it up with an industry leading SLA (service level agreement). Plexcom's technical support staff monitors the network 24x365 and stands ready to serve our customers.

You choose the best when you choose Plexcom Networks.

30-Day Risk Free Trial

We are so confident you will like our service, we back it with a 30-day risk free trial.
